Cover glass for LCD displays is an essential component in liquid crystal displays (LCDs), primarily used to protect the display panel from external physical damage, scratches, and environmental factors. Its main functions include enhancing the mechanical strength of the display, improving scratch resistance, enhancing optical performance (such as anti-reflection and anti-glare), and improving the touch experience. Common raw materials include soda-lime glass, aluminosilicate glass (such as Corning's Gorilla Glass and AGC's Dragontrail glass), and low-iron glass. These glasses undergo chemical or thermal strengthening treatments to improve their strength and durability.

In the upstream segment, major raw material suppliers include multinational companies such as Corning, AGC, SCHOTT, and Asahi Glass. These companies not only provide high-performance glass substrates but also offer customized processing services such as cutting, drilling, printing, and coating. In the downstream segment, major customers include well-known brands such as Apple, Samsung, Huawei, Xiaomi, Sony, LG, Toyota, and Tesla, as well as various industrial equipment manufacturers and medical device suppliers. These customers have strict requirements for the quality, performance, and delivery capabilities of cover glass for LCD displays, driving technological advancements and innovation throughout the entire industry chain.

In 2024, the global average price of cover glass for LCD displays is USD 5.4 per unit, with total sales reaching approximately 1.18 billion units.
