According to our (LP Info Research) latest study, the global CPE Backsheet market size was valued at US\$ million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the CPE Backsheet is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global CPE Backsheet market. With recovery from influence of COVID-19 and the Russia-Ukraine War, CPE Backsheet are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of CPE Backsheet. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the CPE Backsheet market.

The structure of the CPE backsheet is based on PET, with a fluororesin film on one side and an EVA film on the other side. Due to the existence of the inner EVA layer of the back sheet, the adhesion between the back sheet and EVA is enhanced, which is beneficial to protect the intermediate cells and the entire photovoltaic module. Its disadvantage is that the more fluorine content of the outermost fluororesin film, the lower the surface tension of the film and the weaker the adhesion with EVA.
