The global CPO Switches Chips market size is predicted to grow from US$ 195 million in 2025 to US$ 302 million in 2032; it is expected to grow at a CAGR of 6.5% from 2026 to 2032.

CPO Switch Chips refers to “Co-Packaged Optics” switch chips, a new generation of data center networking switch chips integrated with optical modules to significantly improve bandwidth, reduce power consumption, and minimize latency.In 2024, global CPO Switches Chips production reached approximately 15.2 k units, with an average global market price of around US$ 12 k USD per units. The production capacity for CPO Switches Chips in 2024 was approximately 16 k units. The typical gross profit margin for CPO Switches Chips is between 30% and 45%. The CPO switch chips industry chain includes upstream suppliers of semiconductor materials and advanced fabrication equipment, midstream manufacturers designing and producing high-performance switch ASICs for AI and data center networks, and downstream system integrators and cloud service providers who deploy these chips in high-speed switches and AI compute racks. Upstream focuses on raw silicon wafers, photolithography, and packaging solutions; midstream involves IC design, mask making, wafer fabrication, testing, and packaging; downstream integrates these chips into switches, networking equipment, and large-scale AI data centers to ensure high bandwidth, low latency, and reliable operation. The chain is characterized by high technical barriers, large capital investment, and close collaboration between chip designers, foundries, and cloud operators.

United States market for CPO Switches Chips is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for CPO Switches Chips is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
