The global CPU Air Cooling Radiator market size is predicted to grow from US$ 2109 million in 2025 to US$ 2644 million in 2031; it is expected to grow at a CAGR of 3.8% from 2025 to 2031.

CPU air cooling radiator is a common type of radiator, which includes a cooling fan and a heat sink. The principle of this radiator is to transfer the heat generated by the CPU to the heat sink, and then take the heat away through the fan.

As the CPU operating frequency continues to increase, the heat generated by it will also increase accordingly. Therefore, in order to better adapt to the needs of CPU heat dissipation, future CPU air-cooling radiators may use more efficient heat dissipation materials and designs to achieve higher heat dissipation performance.
