CPVC Compounds refer to specially formulated materials made by blending chlorinated polyvinyl chloride (CPVC) resin with various additives such as stabilizers, lubricants, impact modifiers, pigments, and processing aids. These compounds are engineered to enhance the thermal stability, mechanical strength, chemical resistance, and processability of CPVC materials. CPVC compounds are widely used in the production of pipes, fittings, valves, and industrial components designed to handle hot and cold fluids in residential, commercial, and industrial piping systems. Due to their excellent resistance to high temperatures, corrosion, and aggressive chemicals, CPVC compounds are commonly applied in applications such as hot water distribution, fire sprinkler systems, and chemical processing pipelines.

In 2025, global CPVC Compounds production reached approximately 88,000Tons, and average price was US$2,364/Ton, with gross margin 20%.

United States market for CPVC Compounds is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for CPVC Compounds is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
