Crane conductor bar systems, also known as sliding contact line, sliding line, safety sliding line. The sliding contact wire of the crane is used to supply power to moving equipment, consisting of two parts: the sliding guide rail (fixed part, connected to the power supply, and the constant guide rail is connected by a single length of 4m/piece or 6m/piece), and the collector (sliding part, can slide on or inside the sliding track and contact with the copper strip for power supply, and the collector is used to connect with the mobile motor). At present, crane conductor bar systems (tubular, enclosed), single pole combination sliding contact lines, rigid body sliding contact lines, multi-stage tubular safety sliding contact lines, seamless sliding contact lines, cable sliding contact lines, I-beam cable pulleys, etc. are commonly used. There have been significant improvements in protection level and insulation, and safety is reliable.
