The crane pipe, also known as the fluid arm, is a retractable and movable pipe, which is mostly used in the petroleum, chemical and other industries, such as liquid loading and unloading at petroleum and chemical terminals. Its main function is to transport liquid or gas from one place to another, such as transporting oil or natural gas from production equipment to processing equipment. The crane pipe is usually made of materials such as metal or fiberglass, and has a curved or straight shape. The inner wall is usually coated with an anti-corrosion coating or laser welded to improve its durability and corrosion resistance. The crane pipe is connected to the rigid pipe and elbow through a rotating joint, which can replace the old hose connection to realize the transmission of liquid media between trains, tank cars and trestle storage and transportation pipelines. It has the characteristics of high safety, flexibility and long life.
