Crane Simulator (crane simulation system) is a technology that simulates the operation of real cranes. In layman's terms, it is a virtual reality technology. By inputting the parameters of the control system, console and real environment of the real crane into the simulation software, and then presenting these parameters through virtual reality technology, people can simulate the real crane operation in the virtual environment.

This technique can be widely used in crane training and maintenance work. Through this simulation system, people can simulate the real crane operation without the existence of real danger and risk, so as to improve the operator's skill level and experience. At the same time, the simulation system can also provide the practical experience needed to maintain and repair the crane by simulating different failure situations. In addition, the crane simulation system can also simulate the transportation, stacking and handling process of different loads, so that users can learn all aspects of crane knowledge and skills, and realize high-quality and efficient material flow. Safety and reliability, thus creating greater value for the enterprise.
