The global Crash Test Data Acquisition System market size is predicted to grow from US\$ 352 million in 2025 to US\$ 543 million in 2032; it is expected to grow at a CAGR of 6.6% from 2026 to 2032.

Crash Test Data Acquisition System is an integrated system designed to collect, record, process and synchronize multi-channel high-speed measurement data during controlled vehicle impact tests, capturing signals from sensors such as accelerometers, load cells, strain gauges, pressure transducers and high-speed cameras to quantify crash dynamics, occupant injury metrics and structural responses for safety validation, regulatory compliance, and vehicle design improvement.

The Crash Test Data Acquisition System industry chain begins upstream with suppliers of precision sensors, high-speed analog-to-digital converters, communication modules, programmable logic controllers, rugged connectors and test cables, continues midstream with data acquisition system manufacturers performing hardware design, embedded firmware development, multi-channel signal conditioning, calibration and software integration, and extends downstream to automotive OEMs, Tier One safety component suppliers, independent crash labs, regulatory testing bodies and research institutes that integrate data acquisition systems into crash dummies, vehicles and test rigs to capture synchronized high-frequency measurement data for crash safety evaluation and compliance, vehicle design improvement and advanced safety system development.

Ongoing and planned projects globally include the establishment of advanced automotive crash test and data acquisition laboratories in North America and Europe to support evolving safety regulations, expansion of multi-channel DAQ production lines

with automated assembly and calibration workshops in Asia, joint R&D centers between measurement hardware suppliers and automotive OEMs to develop integrated high-speed data acquisition platforms for next-generation electric vehicle crash testing, upgrades to sensor calibration facilities to support higher sampling rates and broader environmental ranges, and international partnerships to standardize distributed wireless telemetry acquisition systems for large-scale multi-differential crash scenarios.
