Drilling machine or also familiar as drill presses, are used for basically drilling of different sized holes in a variety of materials at many different depths. Drilling machine is an essential tool for performing many types of industrial jobs. Crawling drilling machine are a type of drilling machine which are mounted on chain mounted crawler vehicle which enables it to travel through any terrain and perform critical operation such as drilling on any surface. Crawling drilling machine has ease out various critical operations in construction business by carrying out such operations which are next to impossible for human. Crawling machine consist of sturdy structural channel reinforced with suitable cross members strong enough to withstand high drilling loads. The Boom is provided with a heavy duty lift and swing cylinders to provide rigidity while drilling.

Construction activities has been growing with increase in population and demand of better connectivity, communication & transportation. Hydro power projects, oil caverns, underground tunnel, tunnel through hills are few of the achievements by human civilization in 21st century. Such mighty projects have not been possible with bare hands of human. Crawler drilling machine are extensively used in excavation of hydro power tunnel, rail road tunnels etc. There has been an implementation of a new process or method of drilling for oil extraction, the term has been coined as HDD (Horizontal Directional Drilling). For HDD process across the globe crawler drilling machine is the only type of machine which performs the drilling process for crude oil extraction.
