Creep action thermostats, also known as snap-action thermostats or bi-metallic thermostats, are a type of temperature-sensitive switch used to control electrical circuits based on temperature changes. These thermostats consist of a bimetallic strip made from two different metals with different coefficients of thermal expansion. When the temperature changes, the bimetallic strip bends or warps due to the varying expansion rates of the metals.

Creep action thermostats are designed to provide precise temperature control with minimal temperature hysteresis (the difference between switch-on and switch-off
