Abstracts

The global Cremation Diamonds market size is predicted to grow from US$ 105 million in 2025 to US$ 207 million in 2031; it is expected to grow at a CAGR of 11.9% from 2025 to 2031.

Ashes to diamonds are one of the most beautiful and everlasting ways to remember your loved ones and an eternal symbol of love and remembrance created from the cremation ashes or hair. Cremation diamonds are real diamonds made from the carbon left in cremated remains, or from the carbon in someone’s hair. Cremation diamonds are known by a few names including memorial diamonds and eternal diamonds.

They are grown using a lab grown application process within a high pressure, high temperature (HPHT) machine, first purifying the cremated remains (ashes) to extract the carbon left within. Cremated remains contain 1-4% carbon depending on the age of the person, their diet, and other factors.

In terms of value, North America is the largest consumption region of the Ashes to diamonds, with a revenue market share of 44.75% in 2022. As the largest consumer country in the industry, the United States occupied 43.16% of the global market share in 2022.

Since 2011, companies in this industry have entered the Chinese market. As a country with a rapidly growing middle class, China will become the country with the fastest compound annual growth rate in the global market during the forecast period. The Chinese market will grow at a CAGR of 16.30% from 2023 to 2029.
