The global Crop Color Sorter market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The color sorter is based on the difference in color or shape of the material, through photoelectric detection and image processing means to achieve material sorting and purification equipment that integrates light, electromechanical and electrical. It is widely used in the fields of grain and ore screening, and has been rapidly promoted because of its high cleaning rate, impurity removal rate and carry-out ratio.

High precision and high efficiency: With the development of industrial technology, various industries have increasingly higher requirements for product quality, so color sorters need to have higher precision and efficiency. For example, using more advanced image recognition technology and artificial intelligence algorithms can more accurately identify differences in material color and shape, improving sorting efficiency and accuracy.

Multifunctional and multipurpose: Currently, color sorters are mainly used in industries such as grain, Chinese medicinal materials, ores, but may be expanded to other fields in the future, such as food industries such as fruits, vegetables, and tea, as well as non-food industries such as plastics and ores. Therefore, color sorters need to have more functions and uses to meet the needs of different industries.

Environmental protection and energy saving: With the increasing awareness of environmental protection, color sorters need to pay more attention to environmental protection and energy saving. For example, the use of more efficient light sources and motors can reduce energy consumption; the use of airtight structures can reduce material loss and environmental pollution; the use of detachable and recyclable materials can facilitate waste disposal and equipment recycling.

Intelligence and automation: With the development of Industry 4.0 and intelligent manufacturing, future color sorters may become more intelligent and automated. For example, the use of Internet of Things technology can achieve remote monitoring and intelligent control; the use of robotics technology can achieve automated operations and unattended operations.
