Cross-linking coating agents, also known as cross-linking agents or cross-linkers, are chemical compounds added to coatings to induce cross-linking reactions between polymer chains. These agents play a crucial role in the formation of durable and high-performance coatings by creating a three-dimensional network structure within the coating material. This network enhances various properties of the coating, such as adhesion, hardness, chemical resistance, and mechanical strength.

The global Cross-Linking Coating Agents market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
