The global Cross Roller Ring for Robot market size is predicted to grow from US\$ 483 million in 2025 to US\$ 787 million in 2032; it is expected to grow at a CAGR of 7.4% from 2026 to 2032.

As modern robotics and automated machines perform more tasks than ever, bearings that enable complex motion and effective load handling are making it all possible. For example, many robots and cobots incorporate articulating arms to move, position or rotate heavy objects or perform routine tasks like welding and assembly. And, as robot functionality demands increase, design sizes continually shrink. Crossed roller bearings deliver precise, repeatable motion and can handle large axial, radial and moment loads simultaneously to perform complex tasks. They also fit within the tight confines of today's robots and cobots.
