A cross track crane is a special lifting equipment suspended on a track or steel structure beam. It has the characteristics of 'underhanging', 'multiple fulcrums' and 'cross-track operation'. It is often used for material handling and equipment installation above areas with limited ground space or existing rail transit areas. Its biggest advantage is that it can achieve multi-area, cross-type lifting operations by laying out multiple transverse main beams or longitudinal tracks without being affected by ground obstacles. It has the characteristics of modularization, flexible layout, safety and efficiency, and is one of the key equipment for flexible production and space optimization in modern industry. With the development of industrial intelligence, rail cranes equipped with servo drives, electric hoists and intelligent control systems are gradually upgrading to automation and intelligence.
