Crossed roller linear way, also known as crossed roller guide, is a limited-stroke linear guide. It consists of two guide rails with V-shaped raceways, a roller cage and cylindrical rollers. These cylindrical rollers reciprocate on precision-ground V-shaped raceway surfaces and are arranged crosswise with each other. This special arrangement allows the crossed roller linear guide to withstand loads in all directions and achieve high-precision, smooth linear motion. It is particularly suitable for linear guides where high rigidity and flexible movement are required.

The market for Cross Roller Way is witnessing significant growth due to the increasing demand for automation and precision in various industries. These guides are widely utilized in the semiconductor and electronics industries for wafer handling and positioning equipment. The automotive industry also presents a lucrative opportunity for Cross Roller Way, as they are used in various automated systems for assembly lines and material handling.
