The global Crossflow Membrane Wine Filtration market size is predicted to grow from US$ 563 million in 2025 to US$ 843 million in 2031; it is expected to grow at a CAGR of 7.0% from 2025 to 2031.

Crossflow filtration uses a selective porous membrane that filters a liquid in order to purify, or clarify it. While in dead-end filtration the circulation of the liquid is not perpendicular to the filter (as in cartridges, plate filters, etc), in cross-flow filtration the circulation is parallel to the membrane.

In Crossflow filtration, wine passes tangentially across a membrane with a known permeability. This largely eliminates ‘filter-caking’ experienced with traditional ‘dead-end’ filtration methods and means Crossflow is a continuous rather than batch process.

United States market for Crossflow Membrane Wine Filtration is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Crossflow Membrane Wine Filtration is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
