The global Crude Helium market size is predicted to grow from US$ 3229 million in 2025 to US$ 4792 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

?Crude Helium? refers to unrefined helium gas extracted from natural gas reserves, typically containing impurities such as nitrogen, methane, carbon dioxide, and trace hydrocarbons. It is an intermediate product obtained during the initial stages of helium production, where raw natural gas undergoes cryogenic separation or pressure swing adsorption (PSA) to isolate helium from other components. Crude helium generally has a helium concentration ranging from 50% to 90%, depending on the source and extraction process, and requires further purification (e.g., through catalytic oxidation or membrane filtration) to achieve commercial-grade purity (99.99% or higher) for industrial, medical, or technological applications.

United States market for Crude Helium is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Crude Helium is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Crude Helium is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Global key Crude Helium players cover QatarEnergy, Noble Helium Limited, ExxonMobil, Qatar Liquefied Gas, Gazprom, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2025.
