Demulsifiers, or emulsion breakers, are a class of specialty chemicals used to separate emulsions, for example, water in oil. They are commonly used in the processing of crude oil, which is typically produced along with significant quantities of saline water. This water (and salt) must be removed from the crude oil prior to refining. If the majority of the water and salt are not removed, significant corrosion problems can occur in the refining process.

The global Crude Oil Demulsifier market size is projected to grow from US\$ 1255.1 million in 2023 to US\$ 1622.3 million in 2030; it is expected to grow at a CAGR of 3.7% from 2024 to 2030.
