The global Crude Oil Separator market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

An oil and gas separator is a vertical or horizontal vessel that manufacturers use to separate components in a fluid stream. Typical components in a fluid are oil, gas, water, and sand or sediment. When gas, oil, and water enter the separator, they hit the inlet diverter and begin to separate. Due to the different specific gravities of these components, the separation process will continue at a progressive rate as long as they remain in the vessel.
