'Crude Oil to Chemicals' (COTC) refers to the process of converting crude oil, a raw petroleum product, directly into valuable chemical products, bypassing the traditional stages of refining into fuels. This approach focuses on maximizing the yield of chemicals like olefins and aromatics, which are essential in producing plastics, synthetic fibers, and other industrial materials, rather than primarily producing fuels like gasoline and diesel. The COTC process leverages advanced technologies and catalysts to enhance efficiency and reduce environmental impact, aligning with the industry's shift towards more sustainable and economically viable production methods.
