## Abstracts

The global Cryo-Electron Microscopy Service market size is predicted to grow from US\$ 1018 million in 2025 to US\$ 1930 million in 2032; it is expected to grow at a CAGR of 9.8% from 2026 to 2032.

Cryo-Electron Microscopy Service is a microscopy technology that uses cryo-electron microscopy technology to observe and analyze samples. This technology can keep the sample unchanged at low temperatures, and uses highly coherent electrons as the light source to penetrate the sample and nearby ice layers, image and record the scattered signals, and finally perform signal processing to obtain the structure of the sample.

With the continuous development of cryo-electron microscopy technology, the amount of data acquired is also increasing. In the future, these data will be developed in the direction of intelligent analysis, which will improve the utilization and accuracy of the data.
