Cryo-Sample Preparation Systems refer to a set of techniques and processes used in cryo-electron microscopy (cryo-EM) to prepare biological samples for imaging. These systems are designed to preserve the native state of the sample by rapidly freezing it at cryogenic temperatures, typically below -150 °C. This process, known as vitrification, traps the sample in vitreous ice, allowing it to be imaged without the formation of ice crystals that can damage the structure.

The global Cryo-Sample Preparation Systems market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
