The global Cryo Spiral Freezer market size is predicted to grow from US$ 264 million in 2025 to US$ 372 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

In 2024, global Cryo Spiral Freezer reached approximately 11,547 units, with an average global market price of around US$ 21,952 per unit. Gross margin is about 36%. The cost is 14,488 usd. Production Capacity is about 13,000-15,000unit. Cryo Spiral Freezer is a rapid freezing system that uses liquid nitrogen or liquid carbon dioxide (CO?) as the cooling medium within a spiral conveyor structure to achieve ultra-fast, low-temperature freezing. Products move along a spiral belt inside the enclosed chamber while cryogenic liquids are sprayed or injected, instantly absorbing heat through phase change and rapidly lowering product temperature to preserve texture, moisture, and freshness. Upstream, the system relies on suppliers of cryogenic gases, insulated enclosures, stainless steel spiral belts, valves and piping systems, temperature control units, and automation components. Midstream, cryogenic equipment manufacturers and system integrators design, assemble, and commission the freezing lines. Downstream, these systems are widely used in high-value food processing sectors such as seafood, premium meat, bakery, and ready-to-eat meals where freezing speed, product quality retention, and flexible capacity are critical.
