A cryogenic capsule is also known as a vial that stores liquid medicines in a small cylindrical glass container. These capsules are used for the sole purpose of carefully transporting the drugs, biological materials, samples of humans or animals such as blood, cell or serum and even drugs that need to be stored at a particular temperature. Most of the medicines or drugs are supposed to be stored at extreme temperatures and keep sterilized.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.
