Cryogenic labels are specifically designed to withstand extremely low temperatures, typically below  $-80^{\circ}\text{C}$ , such as those found in cryogenic storage environments like ultra-low temperature freezers and liquid nitrogen tanks. These labels are made from durable materials that can maintain their adhesion and legibility even under such extreme conditions. They are commonly used in laboratories, biorepositories, and medical facilities for labeling and tracking frozen samples, vials, and containers. Cryogenic labels often feature special adhesives and coatings to ensure they remain securely attached and readable, preventing any loss of identification or data integrity.

The global Cryogenic Labels market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
