## Abstracts

The global Crystalline Fructose market size is predicted to grow from US\$ 593 million in 2025 to US\$ 832 million in 2031; it is expected to grow at a CAGR of 5.8% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Crystalline fructose is a processed sweetener derived from corn that is almost entirely fructose. It can also be made from sucrose by splitting the fructose and glucose molecules. Crystalline fructose consists of at least 98% pure fructose, any remainder being water and trace minerals. It is used as a sweetener in the likes of beverages and yogurts, where it substitutes for high-fructose corn syrup and table sugar. Crystalline fructose is estimated to be about 20 percent sweeter than table sugar, and 5% sweeter than HFCS.

The global crystalline fructose market is experiencing steady growth, driven primarily by the increasing consumer demand for low-calorie, natural sweeteners in food and beverages. Crystalline fructose, a pure form of fructose derived from corn or other sources, is known for its high sweetness level—almost twice that of sucrose—while providing a lower glycemic response, making it a popular choice among health-conscious consumers. The shift towards healthier lifestyles, along with the growing prevalence of diabetes and obesity, has led manufacturers to incorporate crystalline fructose as a sugar substitute in a wide range of products, including beverages, baked goods, cereals, and dairy products. This trend is particularly strong in developed markets like North America and Europe, where consumers are increasingly opting for low-sugar and sugar-free products.

Additionally, the market for crystalline fructose is benefiting from advancements in production technologies and the ongoing research into the benefits and applications of natural sweeteners. Emerging markets, such as Asia-Pacific and Latin America, are witnessing a rise in demand as disposable incomes increase and consumers become more aware of the benefits of reducing sugar intake. However, the market also faces challenges, such as concerns over the long-term health effects of fructose and competition from other natural sweeteners like stevia and monk fruit extract. Despite these challenges, the demand for crystalline fructose is expected to grow, driven by its versatility, cost-effectiveness, and alignment with the broader trend toward healthier, natural food and beverage ingredients.
