With the decreasing amount of fossil fuels available on our planet every day, and the fact that humans have realized the toxicity of fossil fuels, clean energy (where solar energy is the most abundant) is the future. Eventually, solar cars and other green cars will completely replace fossil fuel-powered cars. Solar cars operate by using photovoltaic (PV) cells that convert solar energy into electrical energy. The photovoltaic cell door is open to directly convert sunlight into electricity. PV cells are made using semiconductor materials. The most popular element used to make PV cells is crystalline silicon.
