## Abstracts

The global CT Slip Ring market size is predicted to grow from US\$ 122 million in 2025 to US\$ 178 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

A CT slip ring is a large-diameter rotary transmission component used in CT scanners to continuously transfer power, control signals, and high-speed imaging data between stationary and rotating parts of the gantry. It is one of the enabling components behind modern continuous-rotation CT systems because it supports uninterrupted rotation, faster scanning, and stable image-data transmission. In 2025, Global CT slip ring sales are estimated at 8600 units, with an average ex-works price of 14,500 US\$/unit and global capacity is about 13 000 units per year, with a gross margin range of 26%-38%.

The CT slip ring market is mainly driven by growing CT scanner installations, replacement demand in existing fleets, and the need for faster, more reliable high-data-rate transmission in modern imaging systems. As CT systems move toward higher slice counts, faster gantry rotation, and higher image quality, slip rings must support better signal integrity, lower maintenance, and more robust rotary data transmission.
