## Abstracts

According to this study, the global ctDNA Sequencing Service market size will reach US\$ 1408 million by 2031.

ctDNA Sequencing Service is a high-sensitivity molecular testing technique based on liquid biopsy, designed to detect circulating tumor DNA (ctDNA) in body fluids such as blood plasma. ctDNA consists of short DNA fragments released by apoptotic or necrotic tumor cells, reflecting real-time tumor genetic alterations and evolution. This service involves ctDNA extraction from plasma, library preparation, targeted panel capture or whole-exome/genome sequencing, followed by advanced bioinformatics analysis to identify tumor-specific mutations, copy number variations, gene fusions, and methylation patterns. ctDNA sequencing is widely used in cancer early detection, drug selection, treatment monitoring, relapse prediction, and minimal residual disease assessment, making it a cornerstone of precision oncology and personalized cancer therapy.

United States market for ctDNA Sequencing Service is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
