According to this study, the global Cultivated Fat market size will reach US\$ 22.9 million by 2031.

Cultivated fat, also known as lab-grown or cultured fat, is a type of animal fat produced through cellular agriculture by cultivating animal fat cells in a controlled lab environment without raising or slaughtering animals. Derived from a small sample of animal tissue, the cells are grown in nutrient-rich bioreactors that mimic the natural growth process. Cultivated fat replicates the taste, texture, and mouthfeel of conventional animal fat and is often used to enhance the flavor and juiciness of plant-based or cultured meat products. It offers potential environmental, ethical, and health benefits by reducing reliance on traditional livestock farming.
