According to this study, the global Cultured Fat market size will reach US\$ 22.9 million by 2031.

Cultured fat, also known as cultivated or lab-grown fat, is a type of animal fat produced through cellular agriculture by growing fat cells (usually adipocytes) in a controlled lab environment without raising or slaughtering animals. Derived from a small sample of animal tissue, these cells are cultured in nutrient-rich media that support their growth and development into structured fat tissue. Cultured fat is designed to replicate the flavor, texture, and mouthfeel of conventional animal fat, making it a key ingredient in lab-grown meats and plant-based hybrid products. It offers sustainability, animal welfare, and health benefits by reducing reliance on traditional livestock farming.
