The global Cupric Oxide market size is predicted to grow from US\$ 864 million in 2025 to US\$ 1418 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

Cupric oxide (CuO) is a significant inorganic compound appearing as black powder with semiconductor properties and excellent thermal stability. As a transition metal oxide, it remains stable at room temperature but can be reduced to cuprous oxide or metallic copper at high temperatures. CuO finds wide applications in catalysts, ceramic glazes, battery electrode materials, gas sensors, and agricultural fungicides. Its nano-scale materials demonstrate unique advantages in emerging technologies like photoelectric conversion and lithium-ion batteries due to their large specific surface area and special surface effects.

The cupric oxide market is significantly driven by the rapid expansion of new energy industries, with growing demand particularly in lithium-ion batteries and solar cell applications. Manufacturers are focusing on developing high-purity products and nano-scale cupric oxide to meet high-end application requirements. Increasingly stringent environmental regulations are pushing production processes towards greener methods, while technologies for producing CuO from copper-containing waste are gaining attention. In the Asia-Pacific region, the booming electronics manufacturing sector is creating new market opportunities.
