Curbs and curb adapters are essential components in the HVAC (heating, ventilation, and air conditioning) industry, particularly in rooftop HVAC installations. Curbs are raised structures installed on rooftops to provide a stable base for HVAC equipment such as rooftop units (RTUs) or air handling units (AHUs). They are typically made of metal, concrete, or other durable materials and are designed to support the weight of the HVAC equipment while also providing a transition from the rooftop surface. Curb adapters, also known as equipment curbs or curb transition frames, are adapters used to facilitate the installation of new HVAC equipment onto existing curbs. They bridge the gap between the dimensions of the new HVAC equipment and the existing curb, ensuring a proper fit and alignment.

The global Curbs and Curb Adapters market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
