A current limiting switch chip is an integrated circuit used to provide overcurrent protection in a circuit. It prevents circuit damage or equipment overheating by monitoring the current flowing through the circuit and automatically limiting the current output when the set current limit value is exceeded. Current limiting switch chips usually have fast response time and low on-resistance and are suitable for a variety of applications, including power management, USB interface protection, LED drivers, chargers, portable devices, and industrial control systems. They help improve the safety and reliability of circuits.
