The global Custom Polyclonal Antibody Production Service market size is predicted to grow from US$ 716 million in 2025 to US$ 1366 million in 2032; it is expected to grow at a CAGR of 9.9% from 2026 to 2032.

A Custom Polyclonal Antibody Production Service is a specialized service offered by companies or organizations to produce antibodies tailored to a specific target antigen. These antibodies, known as polyclonal antibodies, are generated in animals (such as rabbits, goats, or chickens) by immunizing them with the target antigen. The animal's immune system produces a diverse range of antibodies that recognize different epitopes on the antigen.

Custom polyclonal antibody production services are riding the broader custom antibody market?s steady growth, driven by expanding biologics and cell/gene therapy pipelines, more biomarker-driven diagnostics, and a strong trend to outsource complex antibody work to specialized CROs and CDMOs that offer high-throughput, automated platforms and integrated downstream services. For polyclonals specifically, opportunities include flexible, relatively fast generation of antibodies against difficult or novel targets, custom affinity-purified reagents for omics and bioassays, and emerging demand for engineered or recombinant polyclonal-like mixtures that can provide broader epitope coverage while fitting into standardized QA/QC workflows. At the same time, the sector faces real challenges: regulatory and ethical pressure to reduce or replace animal-derived antibodies (e.g., EU recommendations that countries should no longer authorize animal immunization for antibody production without strong scientific justification), growing institutional requirements that suppliers meet stringent animal-welfare assurances, and scientific competition from non-animal and recombinant technologies that promise

greater reproducibility, all alongside classic outsourcing headaches such as managing IP, data quality, timelines, and cost for highly customized, project-by-project work.
