The global Custom Protein Production Services market size is predicted to grow from US\$ 1932 million in 2025 to US\$ 2807 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

Custom Protein Production Services are tailored, end-to-end bioprocessing solutions that design, synthesize, express, purify, and validate recombinant proteins according to clients' unique research, diagnostic, or therapeutic requirements, covering gene optimization, vector construction, host cell expression (microbial, yeast, insect, mammalian), tag removal, endotoxin elimination, formulation, and quality control to deliver proteins with specified purity, activity, scale, and format for non-standard or proprietary targets not available as off-the-shelf products.

Key trends include growing adoption of AI-driven sequence optimization, single-use and automated bioprocessing, and specialized platforms for difficult-to-express and membrane proteins; opportunities are driven by rising outsourcing in biotech/pharma drug discovery, vaccine development, antibody and cell therapy research, and demand for GMP-compliant custom manufacturing; challenges involve high technical complexity, strict regulatory compliance, batch consistency control, high costs for mammalian expression, and technical bottlenecks for complex protein folding and post-translational modifications.
