Just as many people need to wear glasses, people with lower extremity biomechanical abnormalities or mechanical foot problems caused by these abnormalities need to wear corrective products - orthopedic foot insoles. Orthotics are designed based on the biomechanics of the foot and the structure allows a wide range of modifications and deflections to be created and incorporated into the orthotic, making it a customizable orthotic that can be molded in plaster and fixed directly to the patient's foot, providing Enough space and protection for feet.
