Customized Tethered Drone is a tethered unmanned aerial platform tailored to specific industry application requirements, with continuous power and data connectivity provided via a tether cable to a ground station. Unlike standard tethered drones, customized models can be configured with different payloads (such as sensors, optical systems, communication modules), propulsion systems, and control interfaces according to customer use cases — including communications relay, environmental monitoring, security patrol, aerial coverage, and energy inspection — offering high adaptability and functional extensibility for professional missions. In 2024, the global market size of customized tethered drones is approximately USD 542.7 million, with annual shipments of about 45,190 units. The market is expected to grow at a compound annual growth rate (CAGR) of around 9.2% over the next five years. The average market price is approximately USD 12,010 per unit, typical single-line production capacity ranges from 1,000 to 6,200 units per year, and industry gross margins generally fall within the 23%–39% range.
