The cutting machine is an indispensable equipment in some light industrial industries. According to the traditional concept, the cutting machine is a machine that presses on the die with the help of the force of the machine movement to cut the material. Some changes have taken place in modern cutting machines, and advanced technologies such as high-pressure water beam and ultrasonic wave have been used in leather punching technology, but people still summarize these equipments in cutting machines.

According to the survey data of the company's 'Construction Machinery Research Center', the total sales of the top 50 global construction machinery manufacturers will reach 230 billion US dollars in 2022, and Asian companies occupy an absolute advantage, accounting for 50% of sales revenue, followed by Europe, Sales revenue accounted for 26%, and North America accounted for 23%. The world's top 50 mainframe manufacturers of construction machinery will sell about 1.2 million construction machinery equipment in 2021, and the sales volume will increase by 9%. China is currently the largest factory machinery market in the world. In 2022, the sales of construction machinery companies will account for 24% of the total sales, which is the country with the highest proportion. According to the China Machinery Industry Federation, the operating income of the construction machinery industry will drop by more than 12% in 2022. In 2022, the operating income of China's construction machinery industry will be 797.7 billion yuan. China's annual export volume will reach 44.3 billion US dollars, and the export volume will increase in two years amounted to US\$23.3 billion.
