The global Cutting Machine market size is predicted to grow from US\$ 269 million in 2025 to US\$ 485 million in 2032; it is expected to grow at a CAGR of 8.1% from 2026 to 2032.

In 2025, global cutting & blanking machines production reached approximately 162,000 units. A cutting and blanking machine is an industrial mechanical device used for fixed-dimension cutting and blanking processing of raw materials such as metal, plastic, wood, stone, and composite materials. It is mainly designed to process large-sized plates, pipes, profiles, or coils into specified workpieces or semi-finished products according to production requirements. The equipment is typically equipped with a mechanical transmission system, cutting device, feeding mechanism, positioning system, and CNC control system, and can achieve high-precision processing through methods such as sawing, laser cutting, plasma cutting, flame cutting, waterjet cutting, or punching and shearing. Cutting and blanking machines feature high processing efficiency, stable dimensional accuracy, a high degree of automation, and high material utilization rates. They are widely used in industries such as machinery manufacturing, automotive production, steel structure processing, shipbuilding, electronic equipment, building materials, and furniture manufacturing. With the manufacturing industry moving toward intelligence, flexibility, and automation, modern cutting and blanking machines are gradually developing toward CNC control, high-speed operation, intelligent nesting, automatic feeding, and multifunctional integration. In addition, the integration of industrial robots, machine vision recognition, and digital control technologies is helping improve production efficiency, reduce material waste, and meet the demands of multi-variety, small-batch, and customized production. Cutting & Blanking Machine (Light Duty): USD1700 Per Unit.

The cutting and blanking machine market has maintained steady growth in recent years, driven by the automation upgrade of the manufacturing industry, increasing demand for

metal processing, and the development of customized production models. As essential equipment for processing plates, pipes, profiles, and coils, cutting and blanking machines are widely used in industries such as machinery manufacturing, automotive parts production, steel structure fabrication, shipbuilding, building materials, electrical and electronic equipment, and furniture manufacturing. With companies placing higher demands on processing accuracy, production efficiency, and material utilization, demand for CNC cutting systems, laser cutting equipment, automatic feeding systems, and intelligent nesting solutions continues to increase. At the same time, rising labor costs and the growing number of multi-variety, small-batch orders are driving the industry toward automation, flexibility, intelligent operation, and multifunctional integration. In the future, supported by trends such as intelligent manufacturing, industrial robot applications, and green low-carbon production, the cutting and blanking machine market is expected to maintain stable development, while industry competition will increasingly focus on cutting precision, equipment stability, automation level, energy consumption control, maintenance costs, and customized solution capabilities.
