Cutting oils is a type of lubricant used as a metalworking fluid in several industrial applications. Metalworking fluids are specifically designed for increasing the durability of cutting tools and to prevent wear & tear. The primary application of cutting fluids is to regulate the temperature by cooling. The cutting oil is applied during the machining operations as it removes heat by carrying it away from the workpiece interface. Cutting oils also act as a lubricant and lubricate the workpiece interface. Removal of particulates and chips/metal fines, etc. is also one of the applications performed by cutting oils. Cutting oils are essential in the machining process as excess heat produced during the machining process makes the machine quite prone to wear and tear. Thus, cutting oils play a major role in many of the industrial applications. The composition of cutting oils varies widely depending upon the type of machining process they are used in. They are generally made from natural/synthetic base oils and depending upon the machining application they are put in, certain additives are added to customize their properties. Thus, cutting oils are designed to increase the productivity of machines and the metal working process. Cutting oils find applications in several industrial applications, including the automobile industry. Demand from these industries is anticipated to boost the demand for cutting oils over the forecast period.

Cutting oils find applications in several industrial applications where they play a critical role in increasing productivity and reducing wear & tear, thereby increasing the life of equipment and related parts. Several types of cutting oils are available in the market for

a vast range of applications. Therefore, increasing demand for cutting oils owing to several applications in machining industries is anticipated to augment the growth of cutting oils over the forecast period. Furthermore, advancements in the development of equipment across various industry verticals and growing severe metal working process will also led to rise in demand for cutting oils. Nowadays, equipment manufacturers are more focused on increasing productivity alongside reducing cost, which will promote the use of high quality cutting oils. That apart, increasing industrialization across developing countries, rebound growth in the automobile industry and upgradation to new technologies in sectors, such as metals, manufacturing process, energy etc. will also boost the demand for cutting oils over the forecast period.
