The global Cutting Submersible Sewage Pump market size is predicted to grow from US\$ 2184 million in 2025 to US\$ 3441 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

In 2025, global sales of cutting submersible sewage pumps reached approximately 3.1 million units, with an average selling price of US\$720. Cutting Submersible Sewage Pumps are sewage conveying devices that integrate a submersible motor, pump body, and cutting mechanism. They use a high-speed rotating alloy cutting disc to break down fibers, impurities, and solids in sewage before discharge. Suitable for high-solids content and easily entangled conditions, they are widely used in municipal sewage, residential basements, commercial buildings, industrial wastewater, and rural sewage treatment. Upstream raw materials mainly include cast iron or stainless steel pump bodies, alloy steel cutting blades, copper wire motors, mechanical seals, rubber seals, and cables. Downstream suppliers are concentrated in municipal engineering companies, sewage treatment plants, construction and installation companies, and industrial users. Global total production capacity in 2025 was approximately 3.6 million units, with an average industry gross margin of approximately 38%. With the advancement of urbanization, the renovation of aging drainage systems, and the increasing demand for decentralized sewage treatment, coupled with rising requirements for high reliability, low maintenance, and energy-efficient operation, submersible cutting sewage pumps have a continuously growing demand and clear business opportunities in municipal upgrades, industrial environmental protection investments, and infrastructure construction in emerging markets.
