The global CVD Diamond CMP Pad Conditioners market size is predicted to grow from US$ 179 million in 2025 to US$ 275 million in 2031; it is expected to grow at a CAGR of 7.4% from 2025 to 2031.

CVD (Chemical Vapor Deposition) Diamond CMP (Chemical Mechanical Polishing) Pad Conditioners are specialized tools used in the semiconductor manufacturing industry for conditioning and maintaining the polishing pads used in the CMP process. These pad conditioners are made using CVD diamond, a synthetic diamond material produced through a chemical vapor deposition process.

At present, considering the cost and the impact of silicon wafer size on the performance and efficiency of integrated circuits, the increase in wafer size is an inevitable and mainstream trend, especially 8 inches and 12 inches. In the future, wafers may develop in the direction of 18 inches. However, the larger the size, the more difficult it is to produce the corresponding CMP pads. When downstream dimensioning becomes an inevitable trend, if you want to occupy the market, you must be able to develop large-size pads, otherwise you will be eliminated by the market. With the increasing expectation of superior performance of integrated circuits, CMP pad dresser performance must be improved, so its performance must be more stringent in the future.

In terms of consumption, South Korea is currently the largest consumer market in the world, accounting for 23.54% of the market in 2022, followed by mainland China and Taiwan, accounting for 20.73% and 20.10% respectively.
