According to our (LP Info Research) latest study, the global CVD Shower Plate market size was valued at US\$ 16 million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the CVD Shower Plate is forecast to a readjusted size of US\$ 25 million by 2029 with a CAGR of 6.0% during review period.

The research report highlights the growth potential of the global CVD Shower Plate market. With recovery from influence of COVID-19 and the Russia-Ukraine War, CVD Shower Plate are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of CVD Shower Plate. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the CVD Shower Plate market.

A faceplate for a showerhead of a semiconductor wafer processing system having a plurality of gas passageways to provide a plurality of gases to the process region without commingling those gases before they reach the process region within a reaction chamber. The showerhead contains faceplate and a gas distribution manifold assembly.

Semiconductor manufacturing equipment is a medium tool for achieving semiconductor manufacturing processes, playing an important role in all aspects. According to SEMI, worldwide sales of semiconductor manufacturing equipment increased 5% from \$102.6 billion in 2021 to an all-time record of \$107.6 billion in 2022.

In recent years, the localization process of China's semiconductor industry has further

accelerated, and the performance of semiconductor equipment is more flexible than the overall industry. The localization of semiconductor equipment is ushering in a golden wave, and domestic semiconductor equipment is facing more opportunities for verification and trial use, technical cooperation, and import substitution. For the third consecutive year, China remained the largest semiconductor equipment market in 2022 despite a 5% slowdown in the pace of investments in the region year over year, accounting for \$28.3 billion in billings.

The record high for semiconductor manufacturing equipment sales in 2022 stems from the industry's drive to add the fab capacity required to support long-term growth and innovations in key end markets including high-performance computing and automotive. Additionally, the results reflect investments and determination across regions to avoid future semiconductor supply chain constraints like those that surfaced during the pandemic.
