CXL Memory Expansion Module is a memory expansion hardware module based on Compute Express Link technology, used to add pooled, coherent or expanded memory capacity to servers and data center platforms. It connects through PCIe-based interfaces and enables memory capacity scaling beyond traditional DIMM slots, supporting AI, analytics, virtualization, databases and memory-intensive workloads. The market includes CXL memory modules, memory expansion cards and related hardware assemblies, but excludes standard DDR memory modules, SSDs and software-only memory virtualization tools.

The industry chain includes DRAM chips, CXL controllers, printed circuit boards, connectors, retimers, power management chips, heat sinks, firmware and testing equipment. Midstream production covers circuit design, controller integration, memory assembly, firmware development, signal integrity validation, thermal testing, compatibility testing and reliability qualification. Downstream demand comes from cloud

servers, AI data centers, enterprise servers, memory pooling systems, high-performance computing and database infrastructure. Growth is driven by AI memory demand, server memory bottlenecks, CXL ecosystem development and data center resource pooling.
