Cyanogen chloride is used in chemical synthesis (military poison gas), as a fumigant gas warning agent, as a tear gas, metal cleaning (in ore refining or synthetic rubber manufacture), electroplating, and photography. Because of its warning properties, cyanogen chloride was once widely employed as a pesticide. By heating silver tricyanomethanide in liquid cyanogen chloride, cyanogen chloride can be used to make tetracyanomethane and methane tetracarbonitrile. Cyanogen chloride is also used in the Lonza process, which produces ultra-pure malononitrile. Cyanogen chloride is frequently employed for fumigating ships and warehouses, as well as for mineral extraction. Instead of cyanogen bromide, cyanogen chloride was produced by an auto analyzer from chloramine-T and potassium cyanide.
