Cyber Asset Attack Surface Management (CAASM) software is a security tool used to identify, assess, and manage the risk of an organization's network assets being exposed to attacks. It scans networks, applications, and systems to discover potential vulnerabilities, configuration errors, and unauthorized access points. This information helps organizations prioritize security measures and reduce the risk of being attacked.

As cyberattacks become increasingly sophisticated and frequent, the demand for Cyber Asset Attack Surface Management (CAASM) software is growing rapidly. Businesses need to be able to quickly identify and remediate potential vulnerabilities to protect their critical assets. The industry is experiencing rapid growth, driven primarily by the increasing number of cyber threats, stricter data privacy regulations, and greater emphasis on security by businesses. The future market size is expected to continue expanding as new technologies emerge and network complexity increases, leading to increased demand for CAASM software.
