The global Cyber Intelligence Platform market size is predicted to grow from US\$ 11298 million in 2025 to US\$ 30378 million in 2032; it is expected to grow at a CAGR of 15.2% from 2026 to 2032.

A Cyber Intelligence Platform is a unified, integrated security software system that collects, standardizes, enriches, correlates, analyzes and disseminates multi-source cyber threat intelligence (CTI) for security operation centers (SOC), enterprise security teams, MSSPs, government cybersecurity agencies and critical infrastructure operators.

It aggregates structured and unstructured threat data from open-source intelligence (OSINT), dark web monitoring, internal attack logs, third-party intelligence feeds, malware samples, vulnerability databases, adversary tracking data and network traffic logs. Through standardized STIX/TAXII protocols, machine learning correlation and adversary profiling, the platform outputs actionable intelligence: IoCs (IP, domain, hash), TTPs, adversary groups, vulnerability risk ratings, dark web data leakage alerts and attack prediction.

Core value: Enable proactive threat defense instead of passive response, accelerate incident triage, block known malicious indicators in advance, identify high-risk zero-day/vulnerability threats, and support adversary attribution and security strategic decision-making.

United States market for Cyber Intelligence Platform is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
